* Inversion of Control (I.C) 설명

↳ 제어의 역전

② 객체 생성

이전

```
class Car {
```

```
    Engine e = new Engine();
```

```
    void run() {
```

```
        e.start();
```

```
    }
```

```
}
```

새로운 객체를
직접 생성한다

"DI"

Dependency Injection

```
class Car {
```

```
    Engine e;
```

```
    public Car(Engine e) {
```

```
        this.e = e;
```

```
    }
```

```
    void run() {
```

```
        e.start();
```

```
    }
```

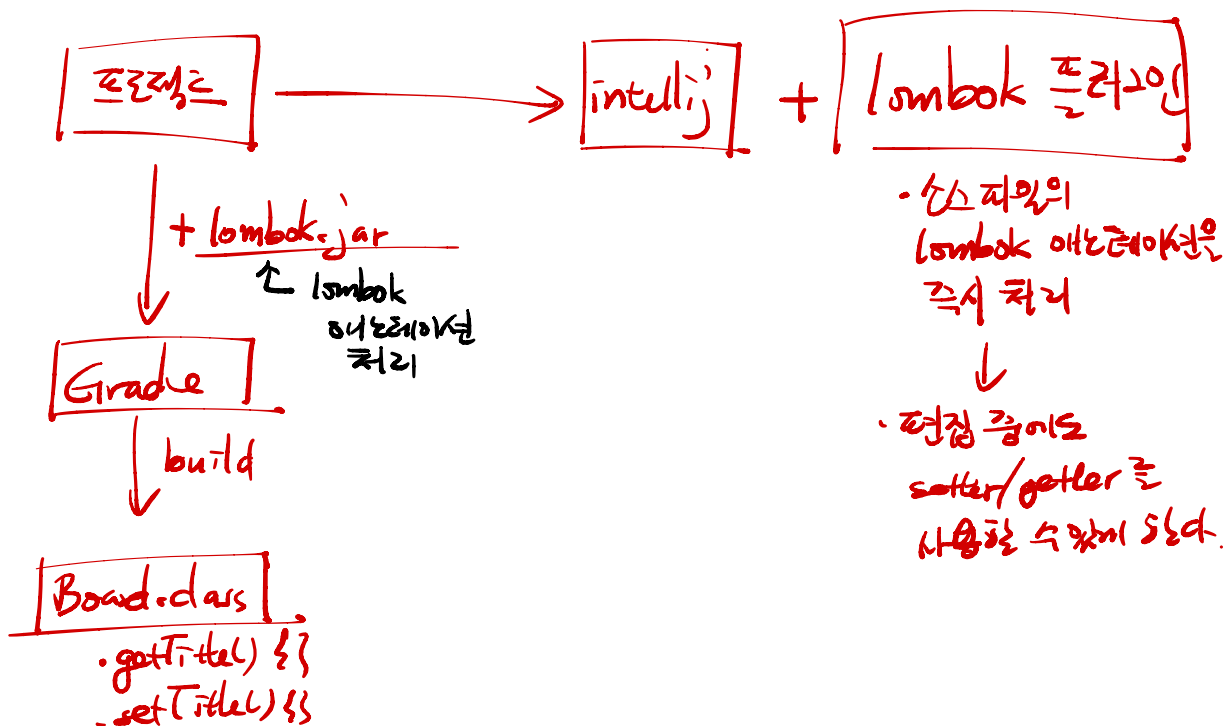

```
}
```

```
Engine e1 = new Engine();
```

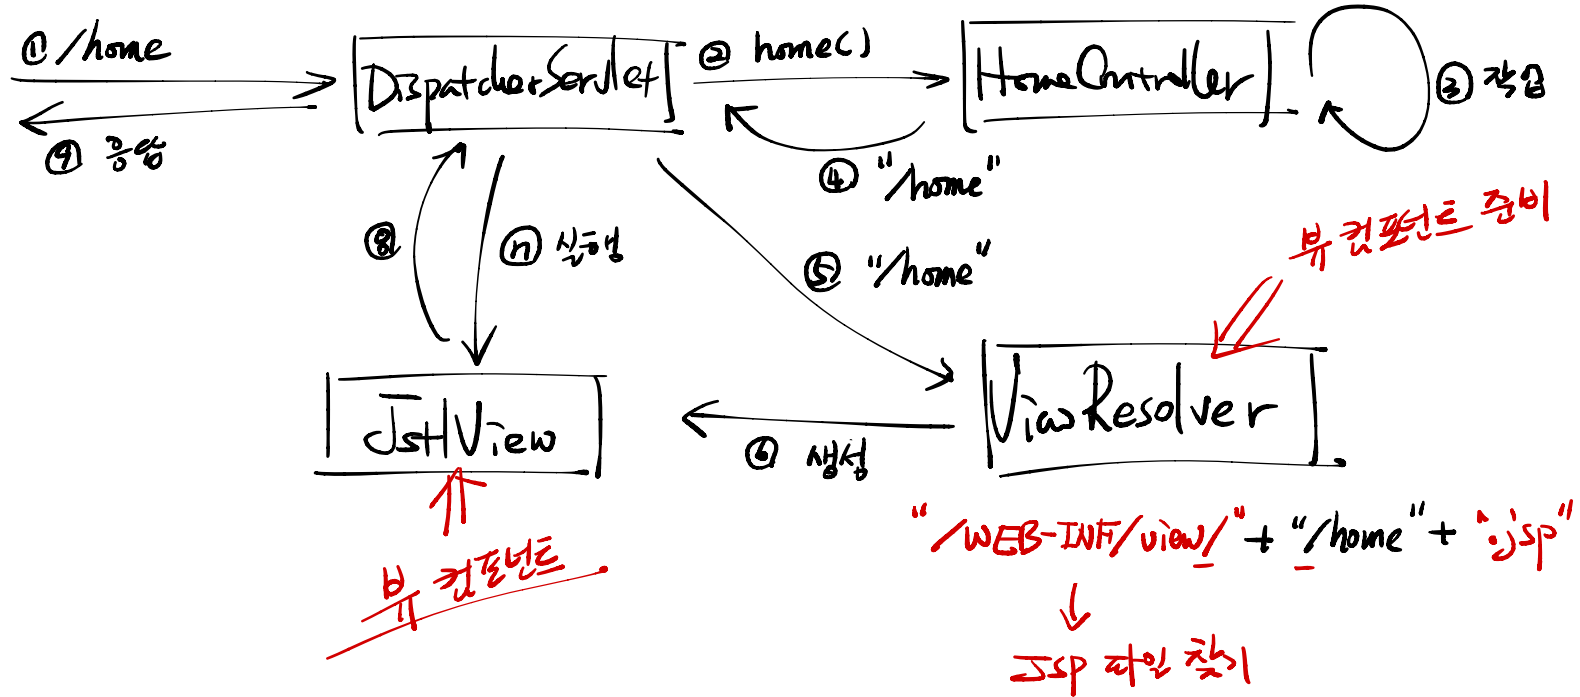

```
Car car = new Car(e1);
```

= Car가 새로운 객체를
의존성 주입

```
@Data
class Board {
    String title
}
```
